

# Project Snapshot: Parker Unified School District

Needing to replace their existing equipment, the Parker Unified School District took advantage of APS Solutions for Business rebates to upgrade multiple schools with LED lighting and energy-efficient HVAC equipment. The goal was to replace outdated equipment and create a cleaner, more comfortable learning environment for students and staff.

“We plan on using the rebates we earned to purchase more energy-efficient HVAC units and invest in the future of our kids,” states Parker Unified School District Superintendent Brad Sales.

## **Four energy-saving projects resulted in:**

- \$57,120 in rebates
- 655,469 kWh in energy savings

## **Energy reduction results equate to more than:**

- 11 million pounds of carbon eliminated
- 6,900 trees planted
- 2.5 million gallons of water saved

# Saving energy at your school starts here

Outdated and less efficient equipment can result in excess energy usage and higher maintenance costs. With APS Solutions for Business, your school can take advantage of rebates to upgrade to more energy-efficient equipment.

## Get started today

- View available rebates for your school and submit rebate applications at [apsapplynow.com](https://apsapplynow.com).
- Find out if your school qualifies for a free energy assessment at [apsbizcheckup.com](https://apsbizcheckup.com).

## Connect with our team

- Work directly with our team to identify opportunities to save energy, earn rebates for qualifying projects and submit rebate applications.
