

Discover energy savings with a free energy assessment

Take advantage of an APS energy assessment and receive a high-level breakdown of your energy usage. This includes how to lower energy costs, opportunities for energy-efficient upgrades and potential rebates for your facility. You can choose to have the assessment conducted by an energy engineer either virtually or in person, based on your preferences.

Commercial buildings can reduce energy usage by up to 30% through energy-efficient upgrades, helping your business cut costs and improve operations.* We are here to help you find solutions that deliver lasting savings. Flip to the back to find out how to request an assessment for your facility.

A personalized report for every facility.

After our team has conducted the assessment of your facility, you will receive a comprehensive report with details and findings that can help you better understand your energy usage. The report will uncover strategies to manage energy consumption, potential equipment upgrades and opportunities for load shifting.

In addition, we'll highlight which upgrades have rebates that can help lower the costs of these improvements. By taking advantage of these rebates, you can save money for more sustainable choices.

Get started today

- Find out if your facility qualifies for an energy assessment at apsbizcheckup.com or by scanning the QR code.
- Learn more about what APS Solutions for Business can do for your facility at aps.com/s4b.
